Cyclopital3D to Host 3D Educational Event at B & H Photo in New York City on March 14th

3D Photography & Video Techniques: How to achieve the best results with the right equipment

3D photography and filmmaking is a hot topic in many arenas today. If you've considered exploring 3D photography and video or are already shooting 3D stereoscopic images and have questions about technique and equipment, you will enjoy this event. The presentation will provide you with an understanding of this emerging technology and help you explore the transition into 3D Stereoscopic photography and filmmaking. Attendees will walk away with a better understanding of the equipment options and some of the major "do's" and "don'ts" of shooting 3D.

The event will culminate with an extensive question and answer period, product demonstrations, and FujiFilm will be giving away a 3D camera to a lucky attendee.

**Cyclopital3D will be unveiling several new 3D products at the event and you can be among the 1st to see them!

Speakers: Ken Burgess, Dimitris Athos, Jim Calverley, Tanya Alsip
Event date and time: Wednesday, March 14th, 4-6 pm

**To Register for the event or get more information on topics,
go to the B & H website at:**
