## 25mm Wide-Angle Lenses for JVC 3D Camcorders GS-TD1 & GY-HMZ1U ProHD

### Expand the potential of your 3D camcorder!

- 86mm lens ring attachment allows you to add accessory optics of your choosing: lens hood, neutral density filters, polarizers, matte-box or other specialized attachments!

The Cyclopital3D Wide-angle lens allows you to vary your techniques by extending the field of view (FOV) to 72 degrees and enabling the use of a multitude of accessory filters, lenses and other attachments.

In addition to the obvious advantage of getting more into the scene, you can also get a little closer to your subject when "infinity" is in the background while maintain the same amount of parallax in the image.

#### Features and Benefits:

- Widens the field of view (FOV) to 72 degrees
- Add neutral density filters, polarizing filters, gradient filters, lens hoods, matte-box, or other specialized attachments
- Built in 86mm lens ring may be stepped up or down
- Easily attaches to the tripod mount of the camcorder
- Wide-Angle Lens hood and Lens cap included

#### Tips for use:

- You don't have to limit yourself to the widest FOV when shooting. The benefit of the wide-angle lens is that it gives you more "range," so you can zoom to "normal" or even longer if that's what works for the shot. Note that with or without the wide-angle lens, zooming too far can cause "card-boarding" in your image if you don't widen the stereo base of the camera.

#### Warranty

Your adapter comes with a Limited Warranty against defects in workmanship and materials for 30 days from the date of purchase. The limited warranty does not apply if the product has been damaged by accident, mishandling, misuse, abuse, or alteration.
