## HD3D View-Vaster™

Everyone remembers how exciting it was to see the world by clicking through a View-Master™ viewer reel. The images seen through the new HD3D View-Vaster™ are more than 3 times wider than the old View-Master™. If you've never seen digital 3D images in a stereoscope, you're in for a big surprise! When an HD cell phone is inserted into the View-Vaster™ the resulting 3D images are comparable to looking at a 65" HD3D TV from just 6ft away! The view is VAST!

The 1920x1080 Full HD displays in the newest cell phones (with a pixel density over 440 ppi) provides the perfect means for portably displaying 3D.

### HD3D View-Vaster™ Features & Benefits:

- Portable, self-contained, no need to plug it in to external computer
- Directly transfer your memory card from your camera to your viewer for immediate viewing
- Perfect tool for 3D filmmakers needing to review their work on-set
- Easily show 3D work to potential & existing clients and friends
- Fully enclosed viewing area eliminates outside distractions
- Full central septum eliminates side images
- Custom-made, achromatic, flat field, anti-reflective glass lenses
- Wide-range focus adjustment for glasses-free viewing
- Interocular adjustment for improved viewing comfort
- Removable lenses for easy cleaning
- Internal lens ring allows for attachment of corrective lenses
- Cell phone mount is easily changed out, so the View-Vaster™ won't go obsolete next year when your cell phone does
- Built-in tripod mount for tabletop use
- High-quality craftsmanship, made in the USA

The high-quality craftsmanship, combined with the vibrant HD displays, portability and ease of use ensures that 3D enthusiasts and film-makers alike will enjoy hours of pleasure viewing 3D images and videos with the View-Vaster™.
